SUMMARY

Business analyst with three years at Impelsys owning the RFP/RFQ cycle end to end — \$250K+ in deals, 20–25 bids a year, and C-suite demos across education, publishing and healthcare. I went back for an M.S. in Business Analytics at RIT (GPA 3.89, STEM) to build the technical half: volatility models, credit-risk ranking, survival analysis. Since then I have shipped three AI products end to end and spent nine weeks on a client engagement documenting a system its own founder could no longer explain. Comfortable in a client meeting, a pricing model, or a codebase — looking for analyst roles that use all three.

EXPERIENCE

Student Research Intern

Jan 2026 – Aug 2026

Rochester Institute of Technology, Rochester, NY

- Conducted systematic literature reviews across 12 premier IS journals (MIS Quarterly, ISR, JMIS), curating 49+ peer-reviewed articles on AI and ESG.
- Built and maintained a structured research repository with abstract screening and relevance tagging.
- Supported manuscript formatting and editorial preparation to journal submission standards.

Graduate Assistant — Financial Analysis

Sep 2025 – May 2026

Rochester Institute of Technology, Rochester, NY

- Analyzed firm fundamentals through time-series regression in R and Python, surfacing market trends that shaped risk-management thinking for institutional portfolios.
- Researched AI-driven market disruption, synthesizing large datasets into insight on emerging business models and sector shifts for investment decisions.
- Built financial models to evaluate company valuations and assess market volatility, supporting academic research in corporate finance.

Analytics Consultant — Capstone Engagement

Jun 2026 – Aug 2026

US real-estate intelligence startup (client engagement via RIT) — remote

- Worked in a ten-person team on a nine-week engagement with a live sponsor, delivering every two weeks.
- Built the system map for a product running on an undocumented 23-tab workbook — 66 components and 63 connections, with each tab classified by whether it was safe to edit or overwritten by a script; 52 links traced to a cited source and 11 marked inferred.
- Co-built the tool layer that let AI assistants query the product directly (Model Context Protocol), owning the data-access layer over 8 core and 12 metric tables; contributed to the database migration and ERDs.
- Wrote a reconciliation that re-derives every score in the client's 879-row log from its documented inputs, so the team can re-run the check after any change.

Business Analyst

Aug 2022 – Jul 2025

Impelsys Pvt Ltd, Bengaluru, India

- Owned the RFP/RFQ process end to end, structuring proposals that lifted the win rate 25% across \$250K+ in deals over my tenure.
- Priced complex SaaS solutions with cross-functional teams, landing within 85% accuracy on scope and margin estimates.
- Ran 20–25+ bids a year and demoed directly to C-suite stakeholders across education, publishing, and healthcare.

EDUCATION

M.S. Business Analytics (STEM)

Aug 2025 – Aug 2026

Rochester Institute of Technology — Saunders College of Business (AACSB) · GPA 3.89/4.0

B.B.A. Finance & International Business

Jun 2019 – May 2022

CHRIST University, Bangalore (NAAC A+) · CGPA 8.97/10

Advanced Certificate, Business & Data Analytics

May – Jul 2025

Indian Institute of Management Udaipur (AACSB)

PROJECTS

Built solo unless noted. Three are live products; the rest are full studies. Every number below comes from the underlying code and reports — deeper write-ups, dashboards, and source at bhargav-portfolio-lake.vercel.app.

- **BidCraft — AI RFP automation** (live): turns the 40–60-hour RFP grind into a grounded, confidence-scored first draft. Reads the RFP, retrieves your strongest past answers by meaning (2,800-entry knowledge base, 512-dim embeddings, pgvector), and drafts the response with citations. Born from running 20+ enterprise proposals a year at Impelsys. Next.js 16 · Claude · Voyage AI · Supabase. bid-craft-beta.vercel.app
- **S&P 500 volatility forecasting**: ARIMA + GARCH pipeline that called the market's volatility state correctly 81.5% of the time vs a 70.5% rolling baseline across 1,765 walk-forward forecasts — 14.7% lower RMSE, 0.88 correlation with the VIX, and it reacted to the COVID crash days before the baseline did.
- **Customer churn & survival analysis**: predicts not just who will leave but when — XGBoost for the who (0.981 AUC, 0.84 F1), a Cox survival model for the when, SHAP for the why, on ~5,600 real e-commerce customers.
- **Amex credit-default prediction**: engineered 1,085 features from raw statement history; LightGBM ranked defaulters at 0.948 ROC-AUC — the riskiest decile it flagged was 94% actual defaulters, and the top three deciles caught 85% of all defaults.
- **Options trading bot** (live): a vol-gated SPY options strategy that stands aside when the VIX term structure says panic — lifting Sharpe from 1.21 to 1.66 and cutting max drawdown 87% in an 8-year backtest; runs live on Alpaca paper trading. trading-bot-dashboard-five.vercel.app
- **Precision Retail Pro** (live): turns two CSVs — inventory and sales — into demand forecasts and ABC/dead-stock alerts, giving small retailers the inventory intelligence that enterprise systems price out of reach. precision-retail-pro.vercel.app
- **Financial-restatement risk**: Fraud-Triangle-based screens over 1,000+ firms showing that a 20% drop in net income raises restatement odds roughly 3.5× — pressure, not complexity, is the tell.
- **Also on the portfolio**: hospital-stay triage on 113K patients (Heritage Health Prize), NYC taxi trip-duration prediction, real-vs-fake-news NLP on 22K headlines, healthcare database in Oracle APEX, and market-basket analysis in R.

SKILLS

Languages & Data: Python (pandas, NumPy, scikit-learn, XGBoost, LightGBM, SHAP), R (tidyverse, survival, caret, tidytext, arules), SQL (Oracle, PostgreSQL, PL/SQL), TypeScript / JavaScript

AI & Analytics: Machine learning (Random Forest, Gradient Boosting, ensemble ranking); survival analysis; NLP & topic modeling; time-series forecasting (ARIMA, GARCH, Prophet); association-rule mining; RAG & vector search (Voyage AI embeddings, pgvector); LLM integration (Claude API)

Business: Financial modeling & pricing; RFP management & pre-sales solutioning; win/loss analysis; client discovery & C-suite communication; research design

Tools & Platforms: Tableau, Power BI, Advanced Excel, matplotlib/ggplot2; Next.js, React, TipTap, Zustand, Supabase; Git, Jupyter, Oracle APEX, EndNote, Alpaca API, Vercel

Spoken: English · Kannada · Hindi · Tamil
