SUMMARY

Analyst with three years of enterprise pre-sales behind an M.S. in Business Analytics (GPA 3.89) and a finance degree. At Impelsys I owned proposals worth over \$1M a year and saw first-hand where deals, pricing, and data break; at RIT I built the technical depth to fix them — volatility models, credit-risk rankings, survival analysis. Along the way I shipped three working AI products, alone, end to end. Equally at home in a client meeting, a financial model, or a codebase — and looking for analyst roles that use all three.

EXPERIENCE

Student Research Intern — Accounting Analytics

Jan 2026 – Aug 2026

Rochester Institute of Technology, Rochester, NY · Graduate Assistant (Jan–May) → Research Intern (May–Aug)

- Ran the literature side of a faculty research program on AI and ESG: read, screened, and tagged 49+ papers across 12 leading information-systems journals (MIS Quarterly, ISR, JMIS), building the organized, searchable library the research is written from.
- Converted 70+ academic references into EndNote import files and prepared manuscripts to journal submission standards — removing the manual bottleneck in the lab's writing workflow.
- Graded and gave structured feedback across accounting-analytics cohorts of 25+ students; built seminar presentations on AI in accounting information systems and AI for SME growth.

Graduate Assistant — Financial Analysis

Sep 2024 – May 2025

Rochester Institute of Technology, Rochester, NY

- Analyzed the fundamentals of 50+ public companies with time-series regression in R and Python, surfacing sector trends the faculty used for risk-management research.
- Built forecasting models across 10,000+ observations — EV-loan repossession risk and S&P 500 volatility (ARIMA + GARCH) — cutting forecast error by 18% against the standing baseline.
- Maintained an Excel dashboard tracking \$500M+ in financial-restatement events, the working dataset for faculty research on earnings manipulation and governance failure.
- Modeled credit default with XGBoost and SHAP (0.98 AUC) for instructor-led case studies.

Business Analyst

Jul 2022 – Jul 2024

Impelsys Pvt Ltd, Bangalore, India

- Owned proposal responses for \$1M+ a year in enterprise publishing and edtech deals (Wiley, Pearson, McGraw-Hill); the win rate rose 25% on the strength of sharper, evidence-led positioning.
- Wrote and quality-checked 80+ RFP responses end to end — scope, pricing, compliance mapping, executive narrative — and cut turnaround 30% by building the team's standard response playbook.
- Built the Excel pricing models behind multi-product bids: FTE cost allocation, margin floors, and vendor benchmarks that kept bids competitive without giving away the margin.
- Studied win/loss patterns across 200+ proposals in Python; the pricing and messaging gaps it exposed reshaped the go-to-market playbook.
- Led discovery calls and C-suite presentations, turning loosely-defined transformation asks into clean solution blueprints — 100% compliance on \$500K+ contracts.

EDUCATION

M.S. Business Analytics (STEM)

Aug 2024 – May 2026

Rochester Institute of Technology — Saunders College of Business (AACSB) · GPA 3.89/4.0

B.B.A. Finance & International Business

Jun 2019 – May 2022

CHRIST University, Bangalore (NAAC A+) · CGPA 8.97/10

Advanced Certificate, Business & Data Analytics

May – Jul 2025

Indian Institute of Management Udaipur (AACSB)

SELECTED PROJECTS — BUILT SOLO, END TO END

Three are live products; the rest are full studies. Every number below comes from the underlying code and reports — deeper write-ups, dashboards, and source at bhargav-portfolio-lake.vercel.app.

- **BidCraft — AI RFP automation** (live): turns the 40–60-hour RFP grind into a grounded, confidence-scored first draft. Reads the RFP, retrieves your strongest past answers by meaning (240-answer knowledge base, 512-dim embeddings, pgvector), and drafts the response with citations. Born from running 20+ enterprise proposals a year at Impelsys. Next.js 16 · Claude · Voyage AI · Supabase. bid-craft-beta.vercel.app
- **S&P 500 volatility forecasting**: ARIMA + GARCH pipeline that called the market's volatility state correctly 81.5% of the time vs a 70.5% rolling baseline across 1,765 walk-forward forecasts — 14.7% lower RMSE, 0.88 correlation with the VIX, and it reacted to the COVID crash days before the baseline did.
- **Customer churn & survival analysis**: predicts not just who will leave but when — XGBoost for the who (0.981 AUC, 0.84 F1), a Cox survival model for the when, SHAP for the why, on ~5,600 real e-commerce customers.
- **Amex credit-default prediction**: engineered 1,085 features from raw statement history; LightGBM ranked defaulters at 0.948 ROC-AUC — the riskiest decile it flagged was 94% actual defaulters, and the top three deciles caught 85% of all defaults.
- **Options trading bot** (live): a vol-gated SPY options strategy that stands aside when the VIX term structure says panic — lifting Sharpe from 1.21 to 1.66 and cutting max drawdown 87% in an 8-year backtest; runs live on Alpaca paper trading. trading-bot-dashboard-five.vercel.app
- **Precision Retail Pro** (live): turns two CSVs — inventory and sales — into demand forecasts and ABC/dead-stock alerts, giving small retailers the inventory intelligence that enterprise systems price out of reach. precision-retail-pro.vercel.app
- **Financial-restatement risk**: Fraud-Triangle-based screens over 1,000+ firms showing that a 20% drop in net income raises restatement odds roughly 3.5× — pressure, not complexity, is the tell.
- **Also on the portfolio**: hospital-stay triage on 113K patients (Heritage Health Prize), NYC taxi trip-duration prediction, real-vs-fake-news NLP on 22K headlines, healthcare database in Oracle APEX, and market-basket analysis in R.

SKILLS

Languages & Data: Python (pandas, scikit-learn, XGBoost, LightGBM, SHAP), R (tidyverse, survival, caret, tidytext), SQL (Oracle, PostgreSQL, PL/SQL), TypeScript / JavaScript

AI & Analytics: Machine learning, survival analysis, NLP; time-series forecasting (ARIMA, GARCH, Prophet); RAG & vector search (pgvector); LLM integration (Claude API)

Business: Financial modeling & pricing; RFP management & pre-sales solutioning; win/loss analysis; client discovery & C-suite communication; research design

Tools & Platforms: Tableau, Power BI, Advanced Excel; Next.js, React, Supabase; Git, Jupyter, Oracle APEX, EndNote, Alpaca API, Vercel

Spoken: English · Kannada · Hindi · Tamil
